

The page features a light cream background with various green decorative elements. In the top-left corner, there is a large, solid green monstera leaf and a cluster of small green oval shapes. The top-center has a green line-art monstera leaf. The top-right corner contains a green circular shape with concentric white lines and a small branch with green leaves. The bottom-left corner shows a green fern frond and a cluster of small green dots. The bottom-center has a green line-art monstera leaf. The bottom-right corner features a large green abstract shape with a cluster of small green dots and a green fern frond.

GAPMINDER

Mia Lastres
Joanna Kwok

BACKGROUND

Gapminder is program looking to fix misconceptions about many global trends

- Independant Swedish Organization
- Non-political
- Non-religious
- Non-economic

The data comes from global sources such as the UN, World Bank, and WHO. By collecting a wide variety of data, Gapminder provides a more fact-based picture of countries in the world.

 Gapminder

PROJECT GOALS

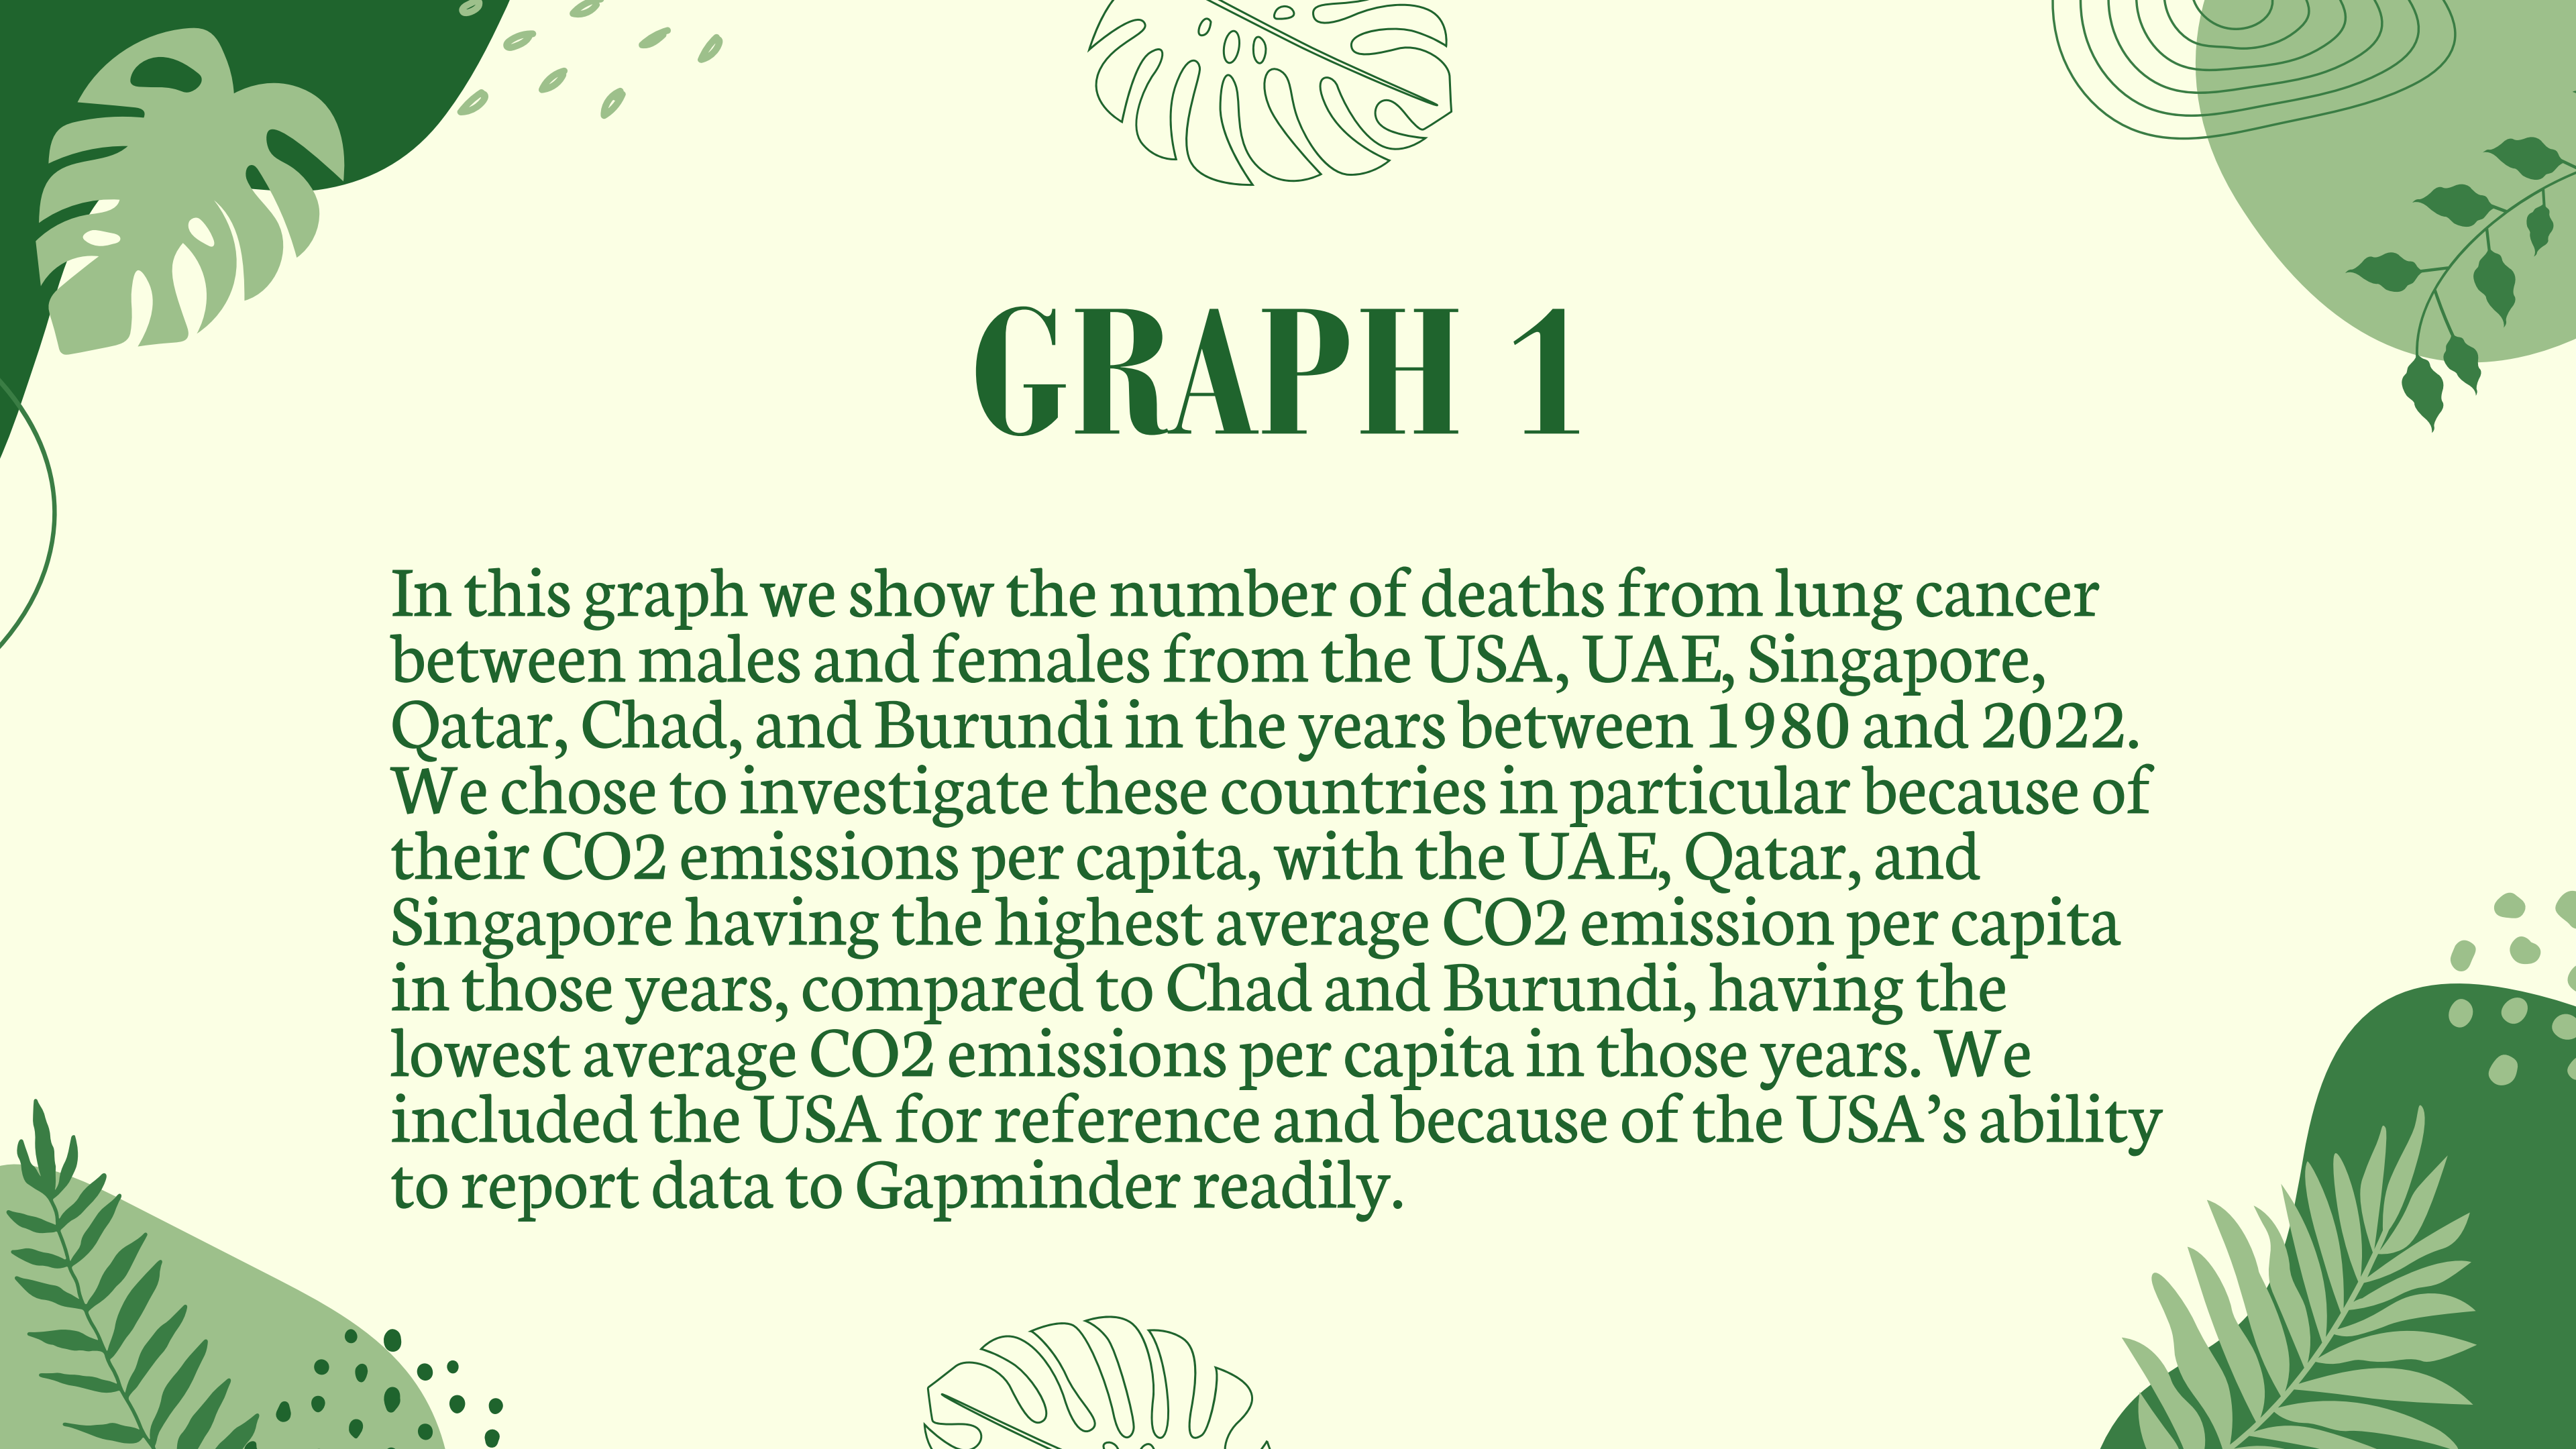

1. Since the goal of Gapminder is to inform people of real statistics from around the world, our goal was to further investigate these numbers to get rid of misunderstandings or biases
2. We looked at a variety of different data, such as population, CO2 emissions, lung cancer deaths, etc., from all countries in order to compare them to each other

DISCUSSION : GRAPHS

Graph 1:
CO2 emission of the top 3 countries with the highest CO2 emissions and the 2 countries with the lowest CO2 emissions compared to lung cancer deaths (male vs female) of those countries in the years between 1980 and 2022.

Graph 2:
GDP of all countries versus the child mortality rates of those countries in the year 2022

Graph 3:
Bar graph of the top and bottom 5 GDP per capita countries and their populations.

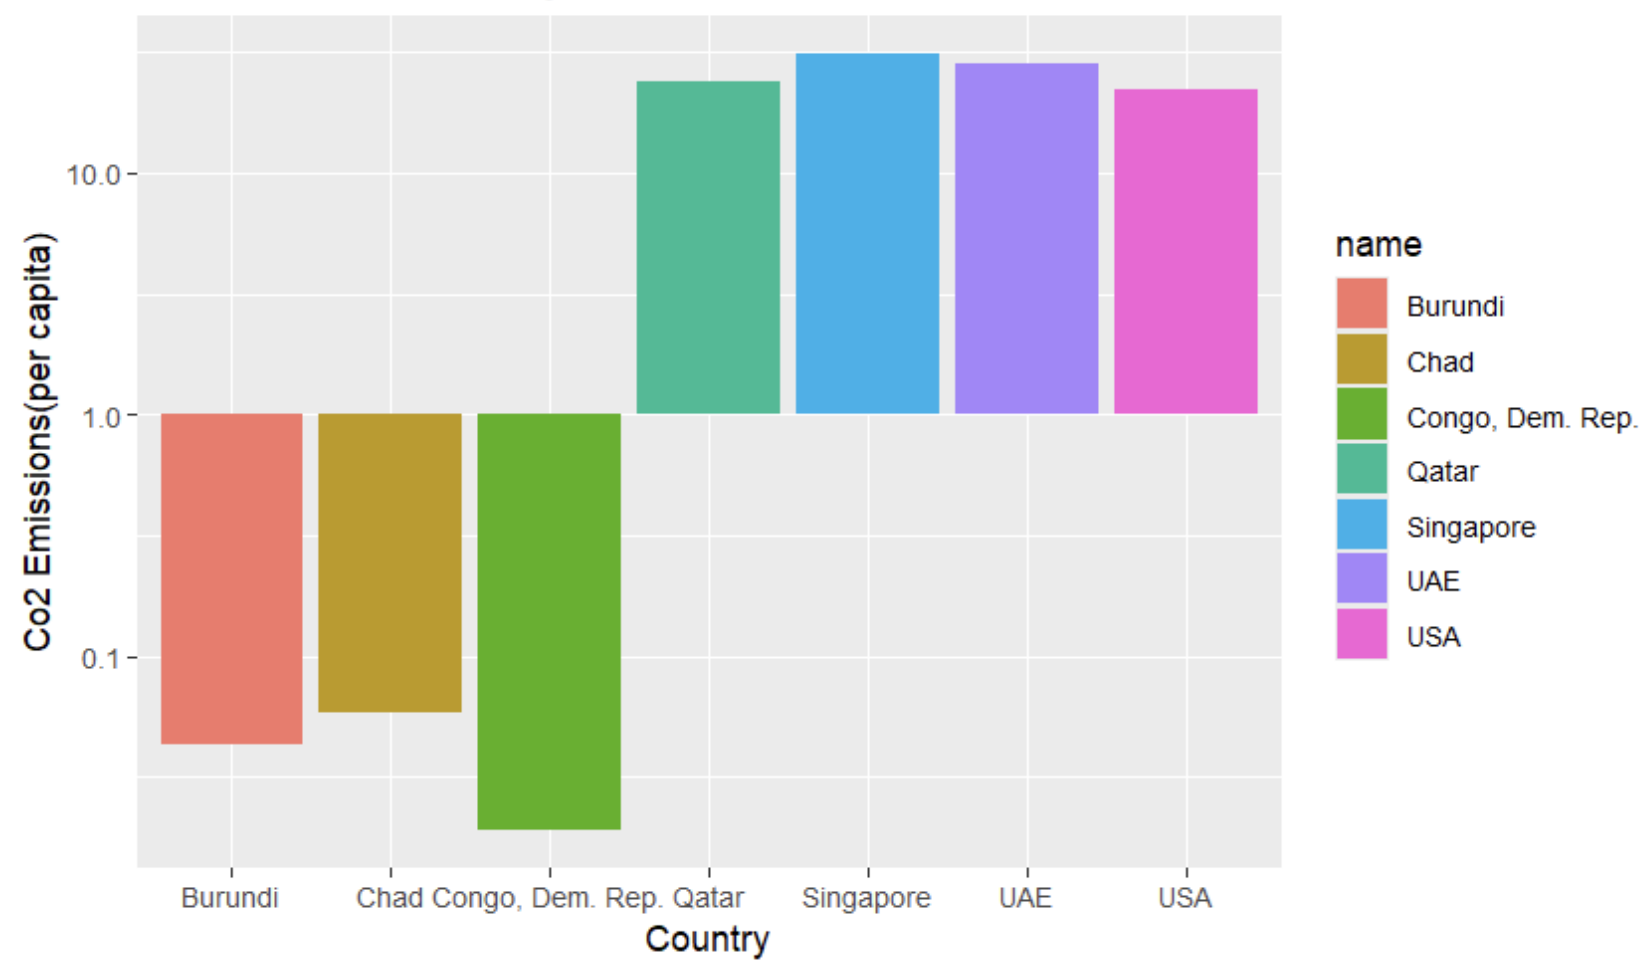

GRAPH 1

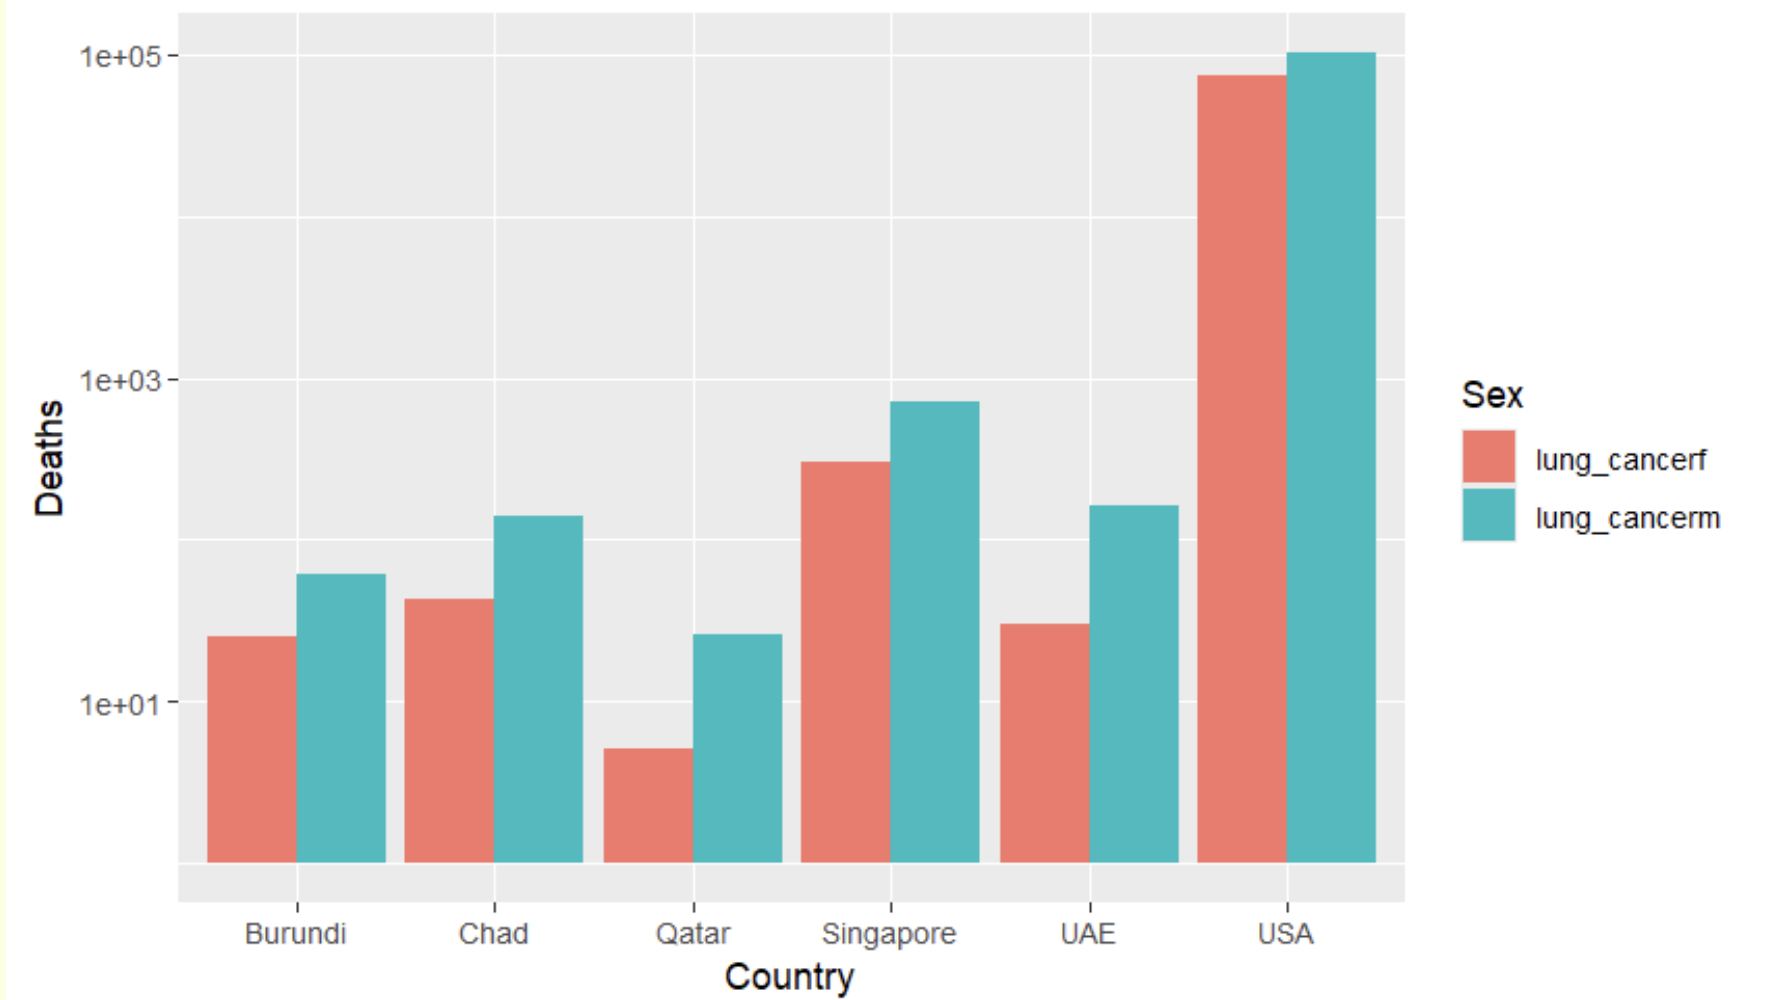

In this graph we show the number of deaths from lung cancer between males and females from the USA, UAE, Singapore, Qatar, Chad, and Burundi in the years between 1980 and 2022. We chose to investigate these countries in particular because of their CO₂ emissions per capita, with the UAE, Qatar, and Singapore having the highest average CO₂ emission per capita in those years, compared to Chad and Burundi, having the lowest average CO₂ emissions per capita in those years. We included the USA for reference and because of the USA's ability to report data to Gapminder readily.

GRAPH 1

Co2 Emissions in the year 2000

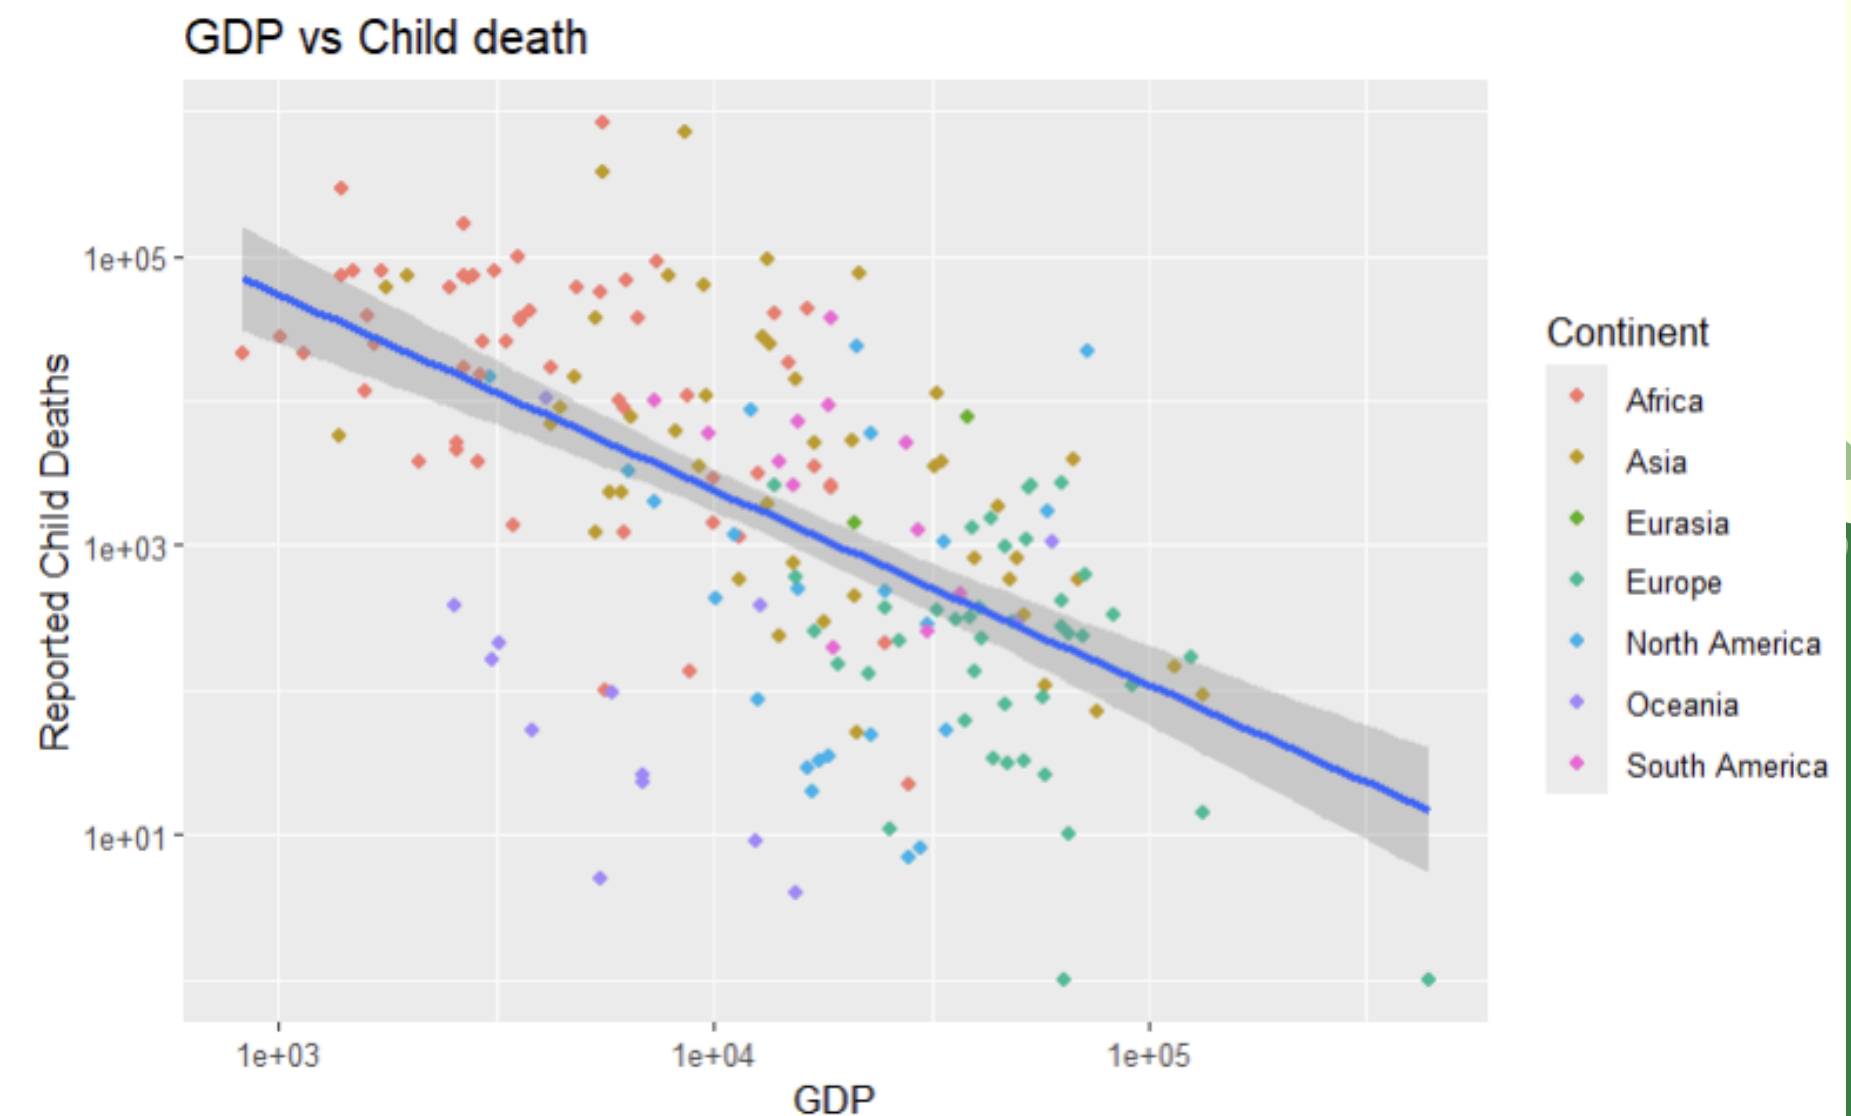

Lung cancer deaths by sex in the year 2000

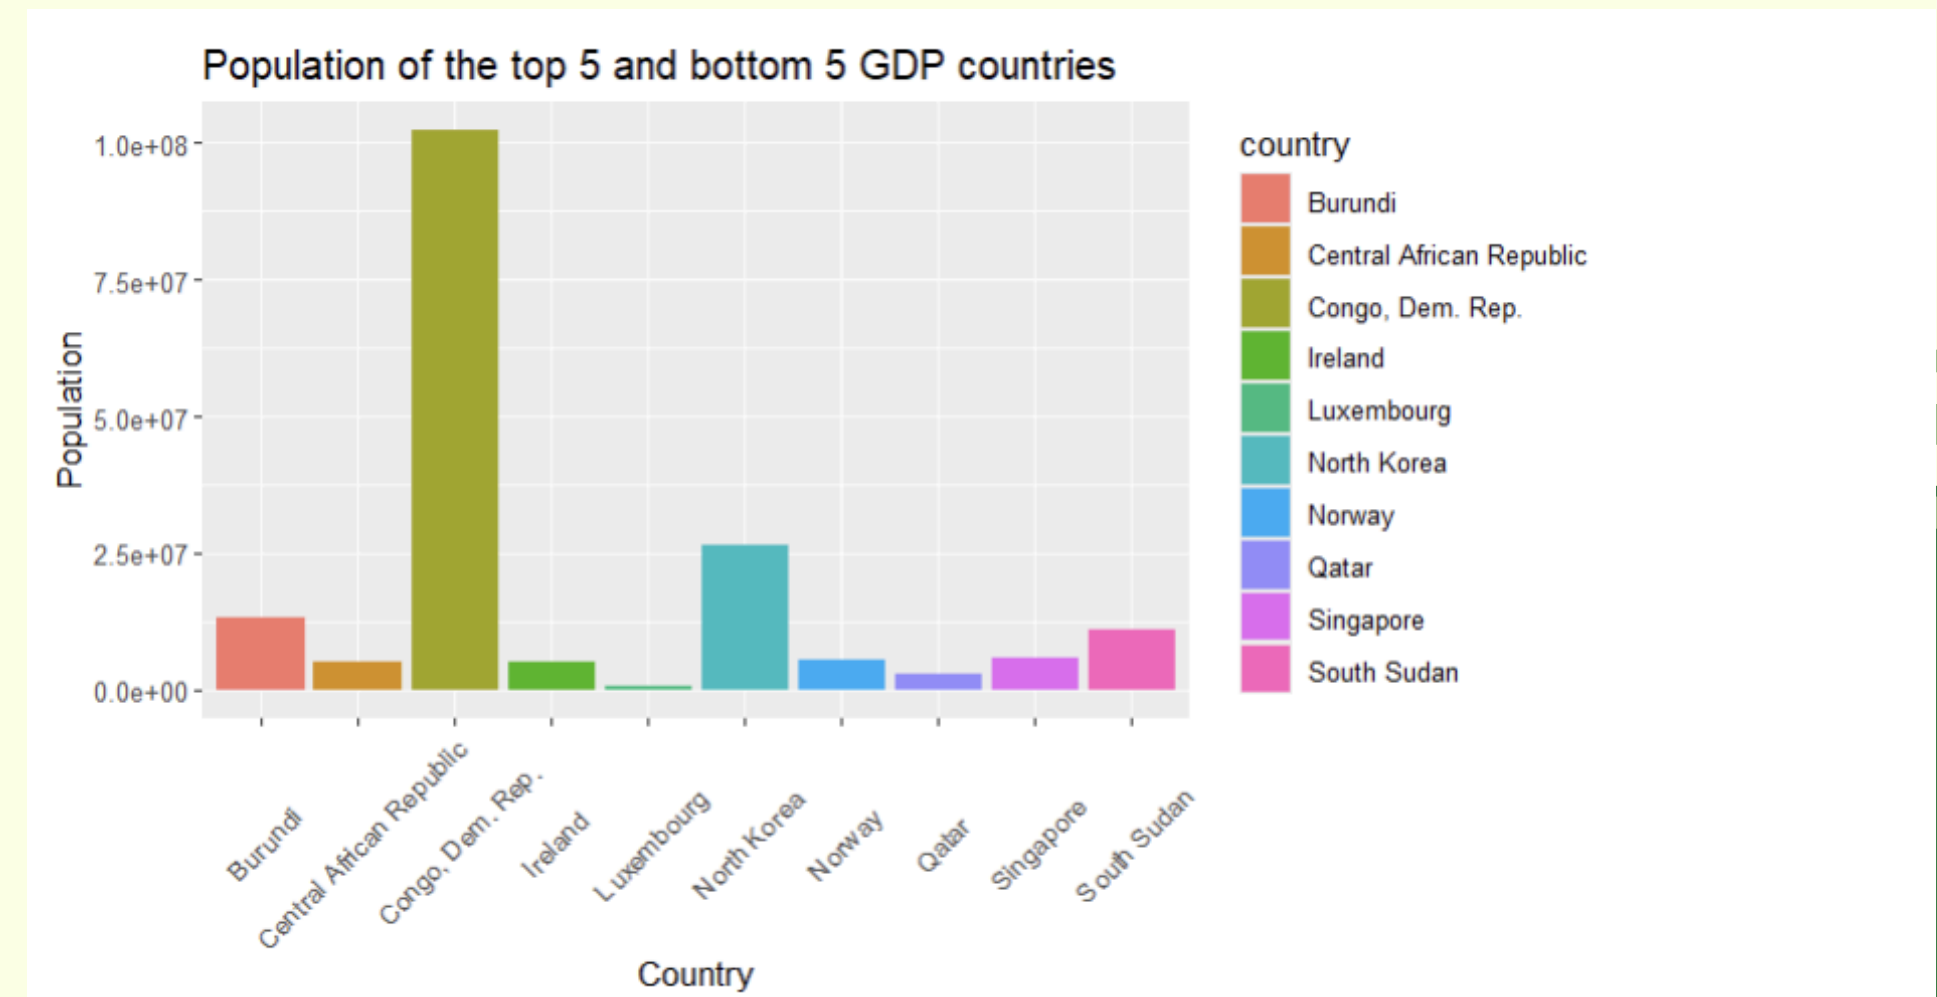

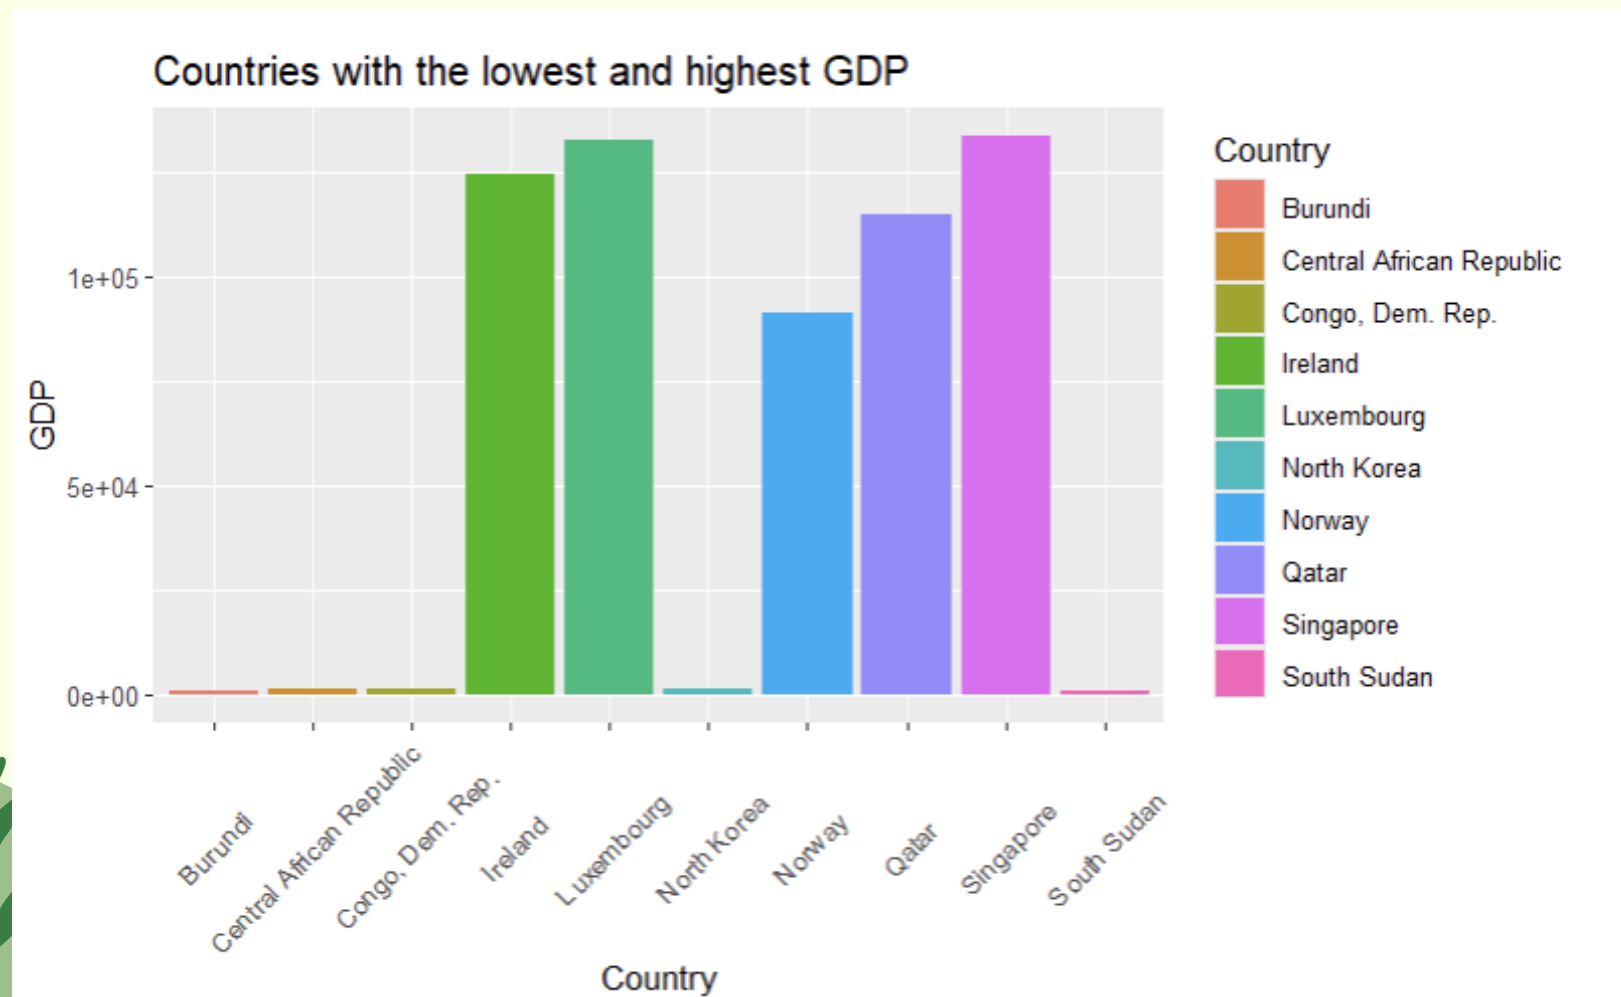

GRAPH 2

This graph shows a scatterplot of the GDP per capita versus child deaths of all countries in the year 2022. From this, we can see that there is a negative correlation between GDP per capita and child death. This means that a country with a higher GDP per capita will likely have less child deaths. The points are colored by continent.

GRPAH 3

These graphs show the countries with the lowest and highest gdp in the year 2022, and then the populations of those same countries in the same year, this shows that there really isnt all that much correlation between the gdp and population in the same way that there might be with child mortality rate

DISCUSSION : APPS

App 1:
Compare the trends of population, life expectancy, GDP per capita, and the CO2 emissions in the USA versus other countries through a side by side line plot from the years 1915-2025

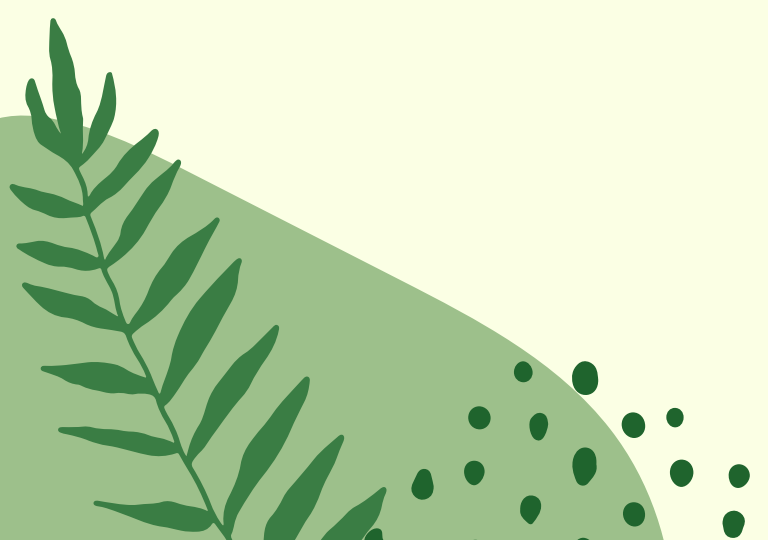

App 2:
Compare the life expectancy of countries/ continents to their GDP per capita throughout the years. Year is a selectable variable through slider. Adapted from the Gapminder website.

App 3:
Compare the CO2 emissions of all continents throughout years. This is shown on a heat map and year is a selectable variable

ANALYSIS/CONCLUSION

Overall, the data given by the Gapminder website/project is amazing for insights into how the countries around the world are progressing throughout the years. Understand that not all of the data is 100% accurate is important, but it gives you a good foothold into the reality of what is happening around the world with many things.

The background is a light cream color, decorated with various green botanical illustrations. In the top left, there's a large, solid green monstera leaf. To its right, a cluster of small, light green oval shapes is arranged in a curved pattern. At the top center, a delicate line drawing of a monstera leaf is shown. The top right corner features a circular pattern of concentric lines, resembling a tree trunk or a ripple, next to a small branch with several leaves. In the bottom left, a branch with small, pointed leaves is visible. At the bottom center, there's another line drawing of a monstera leaf. The bottom right corner is filled with a large, solid green shape, possibly a rock or a large leaf, with a branch of leaves extending from it. The text "THANK YOU" is centered in a bold, dark green, serif font.

THANK YOU
